Detailed Action

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 8, 9 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohara.

With respect to claim 1, Ohara teaches an image processing apparatus (figure 7) which performs a first operation (performed by circuit 25) and a second operation (keyboard 23) which is different from the first operation, further comprising: a first processor 23 as claimed, a second processor 25 as claimed; a memory (16, 17) as claimed; a controller 22 which changes connection of the memory to the first and second processors, 23 and 25, to connect either the first or second operation to the memory.

With respect to claim 2, Ohara teaches the first operation is not performed at the first operation is not performed at the same time as the second operation. See switch 1 via element 24 that switches a fiet or second process but not both at the same time.

Application/Control Number: 09/722,475

Art Unit: 2626

With respect to claim 8, Ohara teaches an image processing apparatus that has a printer wherein the first operation is test print (first energization) for printing a predetermined pattern data and a second operation (second energization) is normal print for printing the document data; said first processor processes the document image data to print the document image (see col. 3, line 57 to col. 4, line 5 where thermo transfer elements for the first and second energization affect the density correction between each energization).

With respect to claim 9, Ohara teaches a density converter (col. 5, lines 41-46) and said memory for storing a conversion table for density conversion performed by said converter (element 23 is a memory).

With respect to claim 14, Ohara teaches an image processing apparatus that has a printer wherein the first operation is test print (first energization) for printing a predetermined pattern data and a second operation (second energization) is normal print for printing the document data; said first processor processes the document image data to print the document image (see col. 3, line 57 to col. 4, line 5 where thermo transfer elements for the first and second energization affect the density correction between each energization). Ohara teaches; a memory (16, 17) for storing data from the first of second processors; a controller 22 which changes connection of the memory to the first and second processors, 23 and 25, to connect either the first or second operation to the memory.

Application/Control Number: 09/722,475

Art Unit: 2626

2.

Claims Objected

Claims 3-7, 10, 11 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3.

Claims Allowed

Claims 12 and 13 is allowed for the reason the prior art does not show the combination of the claimed feature where a first processor is acquired in the prescan and the second processor is acquired in the normal scan.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerome Grant II whose telephone number is 703-305-4391. The examiner can normally be reached on Mon.-Fri. from 9:00 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly A Williams, can be reached on 703-305-4863. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
